

The logo for FIBRAIN, featuring the word "FIBRAIN" in a bold, black, sans-serif font, followed by a stylized icon consisting of three horizontal bars (red, black, and red) and a registered trademark symbol (®).

**FIBRAIN®**

An abstract graphic of a city skyline with colorful lines (blue, red, yellow, purple) representing data or fiber optic paths. The lines are stylized and flow through the city, connecting various icons like buildings, people, and communication symbols. The background is a light gray map of a city.

## FIBRAIN® Distribution

A fiber optic network is a complex system which consists of many accessories in the form of fiber optic equipment.

Each of these element is very important and has a direct impact on the proper operation of the network.

It is therefore absolutely necessary to use only high quality accessories to meet network's needs and requirements (optical power balance, resistance, operation, fault tolerance). In order to meet all these needs FIBRAIN presents solutions which ensure streamlined network operation. It is also necessary to bear in mind that apart from premium quality equipment, the installation needs to take place and be performed in accordance with proper norms and standards.

Therefore, FIBRAIN offers a comprehensive portfolio of specifically designed trainings in the field of, amongst others, proper network design, network operation and troubleshooting. Moreover, participation in these trainings give all attendees a possibility to obtain a certificate and network warranty.

# Patchpanel PS 19"

**Equipment presented in this section is a very important part of fiber optic network.**

**It is also the end or the beginning of each optical path.**

**Server room**

The construction of the equipment is based on telescopic fiber optic, rotating or modular patch panels.

Each of these solution is specifically designed and depends on network topology, number of optical points, as well as quantity and capacity of fiber optic cables.

**Cable tray**

These solutions are often linked to optical network, thus our proposal concentrates the most significant elements of xWDM network as it integrates them in common patch panels which are equipped with specialized front panels.

**These are usually "tailored made" systems to meet individual customers' specific needs and requirements.**

### Description

→ Fibrain telescopic fiber optic patch panel are specifically designed and tailored to meet our customers' needs. Main distribution areas where these panels can be applied are patching shelves and splicing shelves. Removable front panels facilitate installation of all standards of adapters, including hybrid combinations. Patch panels are made of grey RAL7035 powder-coated metal steel and are available in 1U and 2U options. Panels on telescopic rails provide a full opening to mount cables easily. Cable entries are adjusted to mount PG12-PG16 cable glands and cables terminated with FIBRAIN multi-patchcords. The interior design with handles facilitate proper management of fibers. Therefore, adjustable side handles provide the possibility to move the panel inside the cabinets. Our product portfolio offer includes a large variety of front plates, thus almost each standard of adapters can be easily mounted.

### Applications

- Fiber optics interchange points
- Distribution networks
- Server room

### Features & benefits

- Available in 1U and 2U
- Full opening on telescopic rails
- Cable entries in a rear part of the shelf
- Internal perforation to manage tubes and fibers
- Faceplates ready for mounting adapters without screws
- Optional front shelf to facilitate the management of patchcords; Adjustable side handles
- Front plates can be optionally locked with a key
- High capacity; Holder for the strength element of cable

## Telescopic fiber optic patch panel PST-C1

## PST-C1

## Technical specification

	PST-C1
Height [ mm]	1U (44 mm)
Width [ mm]	19" (483 mm)
Depth [ mm]	256 mm
Max. cassette capacity	2
Casing material	Powder painted steel
Front flap	Anodized aluminium

PST-C1 telescopic fiber optic patch panel are available in equipped version.

## Components of the equipped PST-C1:

- Telescopic patch panel C1 with front plate equipped with fiber optic adapters according to the tables below (quantity, adapter type and class acc. to customer's need)
- Fiber optic splice cassette SCM-A-12H/SCM-A-24H (depending on the amount of pigtails and adapters)
- Fiber optic pigtails in Gold grade on G.652D fiber for SM transmission and OM2 fiber for mm transmission (technical data – Connectivity'16 catalog)
- Front shelf for patchcord organisation
- Two vertical cable organizer, equipped with easily opened-handle
- 8 holders facilitates effective placement of fibers
- PG16 cable gland
- Splice protectors 45 mm
- Optional blanking panel (1x panel with adapters, 1x blanking panel)

**PST-C1 with SC fiber optic adapters and pigtails terminated with SC connector**  
(additional components in equipment described above)

## Description

- Fibrain telescopic patch panel offers excellent flexibility during mounting and installation. Mainly used for distribution – patching or splicing shelves. Constructed of high quality material ensuring very easy installation and maintenance.
- Removable front panels facilitates installation of all kinds of adapters, including the creation of hybrid combinations.
- Patch panels are made of powder-coated steel as standard in black and available in 1U option. The movable front flap is made of anodized aluminium which protects pigtails against accidental damage. Panels mounted on telescopic rails provide a full extension for easy cable mounting. Cable entry adjusted to mount PG16 cable glands and terminated FIBRAIN multipatchcords solution. The interior design with handles with handles facilitate the proper management of fiber. Therefore, adjustable side handles provide the possibility to move the panel inside the cabinets.

## Applications

- Fiber optics interchanges points
- Distribution networks
- Server room

## Features &amp; benefits

- 1U
- Full extension on telescopic rails
- Cable entry shifted back in a patch panel
- Handles to manage tubes or fibers
- Removable faceplates for mounting adapters without screws
- Front shelf for patchcords management
- Adjustable side handles
- High capacity
- Moveable front flap, which is a patch cord protection from accidental damage

### Description

→ Fibrain 1U modular patch panels is solution facilitating termination up to 36 / 72 fibers in distribution points as well in server rooms. Smart design allows easy, time-saving way of installation and mounting of fiber optic cables. Main feature is possibility of mounting PS-01 and PS-M1 modules which can be equipped in adapters, splice cassette and pigtails. As a standard modular patch panel is equipped with 3pcs of module cover and 9 pcs of membrane cable entry.

### Technical specification

	PS-19-1-3PS.V0
Maximum fibre capacity	3U (133.35 mm)
Maximum module capacity	436 (19")
Number of cable entry	160
Maximum diameter of cable [ mm]	436 (19")
Length [ mm]	160
Width [ mm]	160
Height [ mm]	aluminium
Material	ABS

### Applications

- Telecommunication server rooms
- FTTH networks
- Structural cabling systems
- Data Center systems

### Features & benefits

- Modules ready to be mounted
- High capacity up to 72 fibers in 1U
- Possibility of install up to 9 cable gland PG16 in entry ports
- Internal perforation to fix entry cables
- Clear management of fiber optic

### Additional equipment

PG16 cable gland	DL16
Module cover	PS-00
Single patch panel module	PS-01-xx
Single patch panel module for MTP/MPO solutions	PS-M1-xx

3. Equipped module for 3U patch panel

## Technical specification

	PS-19-3-0.PRO CHASSIS
Height	3U (133.35 mm)
Width [ mm]	436 (19")
Depth [ mm]	160
Frame material	aluminium
Sliders material	ABS
	PS-01-XX MODULE
Length [ mm]	220
Width [ mm]	129
Depth [ mm]	35

## Description

- Fibrain 3U modular patch panels are solution facilitating termination up to 144/288 fibers in signal distribution points as well in server rooms. Smart design allows easy and time-saving way of installation and mounting of fiber optic cables. Main elements of this solution is frame of modular patch panel (chassis) and equipped 3U modular patch panel. Complete solution also offers patchcords management shelf, tubes and patchcords reserve shelf as well as fiber optic cables tubes separators.
- Additionally 3U modular patch panels can be provide with single modules equipped with MTP®/MPO Direct Split, which is perfect solution for Data Center application. Direct split allows to connect MTP multi-fiber connectors with standard, single-fiber optic connectors.

## Applications

- Telecommunication server rooms
- FTTH networks
- Metro networks
- Structural cabling systems
- Data Center systems

## Features & benefits

- Capacity up to 144/288 fibers in 3U
- Lightweight and strong aluminium construction
- Modules ready to be mounted
- Facilitated mounting of fiber optic cable's tube
- Clear management of fiber optic

## Ordering information

Product	Serial number
Chassis – patch panel frame	PS-19-3-0.PRO
Equipped module for 3U patch panel	PS-01-xx & PS-M1-xx see page 20-21
Plug stopper for unused ports	PS-00-P
Patchcords reserve shelf	PS-19-1-PAT (grey RAL 7035) PS-19-1-PAT-B (black RAL 9005)
Tubes reserve shelf	PS-19-1-TUB
Patchcords management shelf	PS-ORG-1-PP
Fiber optic cables tube separator	RT-01-xx, see page 33

## 3U modules for modular patch panel

**3U module for modular patch panel equipped with fiber optic adapter, pigtails, splice cassette and pigtails reserve cassette in "spliced" version**

### PS-M1 modules for mounting MTP®/MPO Direct Split solution with capacity:

- 1x Direct Split 12F (3 x LC quad adapter)
- 2x Direct Split 12F (6 x LC quad adapter)
- 1x Direct Split 24F (6 x LC quad adapter)

### Technical specification

	PS-01-XX	PS-19-XX
Length [ mm]	220	200
Width [ mm]	129	129
Height [ mm]	35	35

### Ordering information

PS-01-xx	Single 3U patch panel module, equipment versions – page 20
PS-M1-xx	Single 3U patch panel module for MTP®/MPO solutions, equipment versions – page 21

## PS-01-xx & PS-M1-xx

### Description

- Fibrain 3U modules patch panel is a component used in a 3U modular patch panel and a solution which enables termination of max. 12 or 24 fiber optic cables. It can store pigtails and protect fiber optic connections. Patch panels are equipped with splice cassettes for 12/24 45 mm splice protection sleeves. Therefore, the panel has got the cassette with pigtails, which facilitates mounting and secure pigtails. Delivered modules are ready to be mounted because are equipped with adapters and pigtails. PS-01 Fibrain panels guarantee mounting up to 12 SC PC/APC and E2000 PC/APC adapters as well as 3 or 6 LC 4X fiber optic adapters (LC quad).
- Fibrain 3U modules allows to install MTP®/MPO Direct Split, which are perfect solution to combine MTP®/MPO multi-fiber connectors with standard, single-fiber optic connectors. Front panel is designed for different type of fiber optic adapter, like: SC SX, E2000 SX and LC 4X (quad). Additionally, module is equipped with MTP®/MPO adapter (one or two according to Direct Split quantity)

### Applications

- Nodal points of fiber optic networks
- Distribution points of fiber optic networks
- Server rooms

### Features & benefits

- Capacity up to 12/24 splices
- Modules ready to be mounted
- Fiber optic splice cassette made of ABS
- Facilitated identification and work due to 12 colours of pigtails
- Possibility to install fusion and mechanical splices in a fiber optic cassette
- Wide range of fiber optic adapters available
- Adapted to mounting MTP®/MPO Direct Split

## PS-19-xx – 3U front plate configuration

### Single panels for PS-19-01

12xSC SX / E2000™ SX  
6x LC DX (+6 plug stoppers)

## PSR-A0

### Description

- Rotational patch panel PSR-A0 type, in 1U or 2U version, is basic mounting block for fiber management system, in patch panel holder. Available in version routing on the left or right side, so it offers well accessibility to trays and patching cords on both sides. It minimizes and protect patch cords cables movement inside patch panels.
- Patch panel PSR-A0 offers trays patch cords in SC simplex standard for 48 fields in 1U version or 96 fields in 2U, available installation into 2 or 4 splice trays for 24 solders. Tray patch cords allow mount connector for 25 degree angle from the diagonal plane.

### Applications

- Fiber optics interchanges points
- Distribution network
- Server room

### Features & benefits

- Metal casing- anticorrosive protected
- Cable bushing in back parts of line cables
- Cable bushing in the front parts of patchcords
- Patch panel installation on a back or front rack profile
- Capacity up to
  - 48 fibers in 1U
  - 96 fibers in 2U
- Cable bushing in patch panel are equipped in brush guards
- Panel available rotating to left or right side of patch panel (depends on version)
- Offers separated canal for patch cord cables
- Possibilities termination line and local cables on aside or back of patch panel
- Hinged flap of patch panel, protects patch cords against damages

## Description

- Pivot swivel patch panel PSR-B0 type, 1U or 2U height, is basic mounting block for fiber management system in patch panel holder. Available in version routing on the left or right side, so it offers well accessibility to trays and patching cords on both sides. It minimizes and protect patch cords cables movement inside patch panels. Patch panel PSR-B0 is equipped with holder for pivot swivel splice trays SCM-B with maximum capacity of 4 splice trays in the 1U height and 8 splice trays in the 2U height.

## Applications

- Fiber optics interchanges points
- Distribution network
- Server room

## Features & benefits

- Metal casing with anticorrosive protection
- Cable bushings in back part of line cables
- Cable bushing in front part of patchcords
- Capacity up to:
  - 48 fibers in 1U
  - 96 fibers in 2U
- Patch panel installation on back or front rack profile
- Panel available in rotating left or right side of patch panel (depends on version)
- Possibilities of termination cables on side or back of patch panel
- Hinged flap of patch panel protects patchcords from damages

## PZSP

### Description

- Integrated patch panels Fibrain PON facilitate easy management of passive elements installed in telecommunication and providers networks. Variety of products available and tailored solutions additional effects flexibility of PON systems and provides future extension of systems. Available casing of standard 19" dedicated for:
  - integrated splitters shelves for CATV operator
  - integrated splitters shelves FTTH
  - hybrid solutions

### Applications

- WDM systems
- Telecommunication networks
- CATV networks
- Optic amplifiers
- Measuring equipment

### Features & benefits

- Easy management of PON elements
- Clear description of PON elements installed
- Possible installation of 1U and 2U in 19"
- Dedicated and hybrid solution

## LGX solution

### Description

→ Fibrain LGX solutions facilitate easy management of optical passive elements installed in telecommunication and providers networks. Additional chief asset is very easy extension as well as flexibility of demanded configuration adjustment. LGX products offer possibility of mounting within one frame integrated FBT and PLC splitters, combiners.

### Applications

- WDM systems
- Telecommunication networks
- CATV networks
- Optic amplifiers
- Measuring equipment
- Metropolitan networks

### Features & benefits

- Easy management of PON elements
- Clear description of PON elements installed
- Easy extension & development
- Dedicated and hybrid solution

## FDM-xx

### Description

→ Fibrain Din Module FDM-xx is a compact, small cabinet providing the installation on the small area inside the wall box or in a street cabinet. FDM-xx can be mounted on a standard 35 mm DIN-Rail. The FDM-xx capacity is up to 24 splices. FDM Module can be equipped with adapter plate up to 24 SC/FC/ST SX adapters and 2 MTP adapters. Internal part of the module contains holders for flexible organization of the fibers inside a cabinet. FDM Module is adapted to mounting MTP Direct Split.

### Applications

- Nodal points of fiber optic networks
- Distribution points of fiber optic networks

### Features & benefits

- Capacity up to 24 splices
- Can be easily snapped on a DIN-Rail 35 mm
- Cable entries from the top and bottom
- Possibility to mount 24x SC SX and 2x MTP fiber optic adapter
- Available in splice version or equipped with MTP Direct Split
- Compact design

PATCH PANEL PS 19" ACCESSORIES

Identification icons ID-ICON-SET12

Technical specification

Length	9.9 mm
Width	3.4 mm
Height	1.2 mm
Material	PP

Example of application of identification icons on FOBP closure

Ordering information

ID-ICON-SET12

Fibrain identification icons, 12 colours – 144pcs set

ID-ICON-SET12

Description

→ Fibrain identification icons allow to transparent marking of splice cassettes and optical fibers/ tubes inserted into them. The set consists of 144 icons in 12 colours: red, green, blue, white, purple, orange, gray, yellow, brown, pink, black, turquoise (12 icons per color).

Applications

- SCM-A splice cassette
- SCM-B splice tray

Features & benefits

- 12 colors
- Easy identification of cassettes and optical fibers / tubes
- Fast assembly requiring no tools

## PATCH PANEL PS 19" ACCESSORIES

### Tubes reserve shelf

#### Technical specification

	PS-19-1-TUB
Height [ mm]	44 mm (1U)
Width [ mm]	483 (19")
Depth [ mm]	258
Casing material	Powder painted steel

#### Ordering information

PS-19-1-TUB	Fibrain tubes reserve shelf
-------------	-----------------------------

### PS-19-1-TUB

#### Description

- Fibrain tubes reserve shelf offers simple and useful way of gathering and storage of fiber optic cable's tube. The shelf is equipped with telescopic rails, which provide a full opening to mount cables easily. Shelf's interior is equipped with a series of ribbing and perforation to provide easier management of fiber optic cable's tube.

#### Applications

- FTTH systems
- Last mile distribution points
- Last mile connection points

#### Features & benefits

- Full opening on telescopic rails
- Easy access to fiber optic cable's tube gathered
- Faster installation at construction side
- Shelf's interior facilitating installation and management

PS-ORG-1-PP	Fibrain horizontal fiber optic cable organizer
-------------	--

### PS-ORG-1-PP

#### Description

- Fibrain horizontal fiber optic cable organizer is a key elements which facilitate patchcords' management, which are placed between fiber optic equipment in distribution cabinets. This organizer ensures clean and transparent room. Therefore, the organizer is made from anodized aluminium and easily detachable handles made from ABS.

#### Applications

- Key points in fiber optic networks
- Distribution points of fiber optic networks
- Server rooms

#### Features & benefits

- Height 1U
- Width 19"
- Light and made of anodized aluminium housing
- Easy patchcord's organization
- Detachable handles facilitating cables placement

### Fibrain patchcord management for PST-A1 telescopic patch panel

#### Technical specification

	FB2030G.V2P
Height [ mm]	35
Width [ mm]	423 (19")
Depth [ mm]	77
Casing material	Powder coated steel

#### Ordering information

FB2030G.V2P	Fibrain patchcord management for PST-A1 telescopic patch panel
-------------	--

### FB2030G.V2P

#### Description

- Fibrain patchcord management for PST-A1 telescopic patch panel offers simple and useful way of gathering and storage patchcords overlength. FB2030G.V2P is mounted on front plates of PST-A1 patch panel (there is no need to add extra 1U height). Front plate with possibility to mount patchcords using velcro tape.

#### Applications

- FTTH systems
- Last mile distribution points
- Last mile connection points

#### Features & benefits

- Possibility of mounting on front plates of PST patch panel
- Easy access to patchcords gathered
- Faster installation at construction side
- Front plate facilitating installation and management

- Guarantee optimum cable arrangement
- Pack of 10 pcs
- Width: 16 mm - protected against excessive tightening
- Resistant to multiple opening and closing
- Colours facilitate cable identification

## Cable tube divider RT-01-xx

## RT-01-xx

### Description

- Fibrain cable tube divider is specifically designed to provide branchings of fiber optic cables and guarantee cables' tube protection, which run from RT-01-xx cable tube divider mounted on a Distribution Frame or a Tube Overlength Drawer in signal distribution points, as well in server rooms.
- Therefore, well-thought-out design provides easy and cost-effective method of mounting and cable installation.

### Technical specification

	RT-01-0310	RT-01-1205	RT-01-2405

FIBRAIN SCM-A-XX splice cassette

SCM-A-xx

Technical specification

	SCM-A-XX
Length	195 mm
Width	94 mm
Depth	9 mm
Capacity	up to 24 splices
Material	PC + ABS

Ordering information

SCM-A-00	Fibrain splice cassette with a possibility to mount Alubox splitters
SCM-A-12H	Fibrain splice cassette with a handle for 12 heat shrink splice protection sleeves
SCM-A-24H	Fibrain splice cassette with handles for 24 heat shrink protection sleeves

Cassette with an option to mount splitters

Cassette with an option for 12 fusion splices

Cassette with an option for 24 fusion splices

- 1 Various arrangements of side entry ports
- 2 Various arrangements of lower entry ports
- 3 Exchangeable handles for splices
- 4 Identification icons
- 5 Hinges ensuring multi-storage of cassettes
- 6 A change of direction in placing a fiber
- 7 Possibility of storage extra length of fiber

Description

→ Fibrain SCM-A-XX fiber optic splice cassette is an element used in fiber optic equipment such as cabinets, fiber optic modules to guarantee storage of extra length of fiber and protect splices in specifically designed handles. Optimized shape of cassette facilitates effective placement of fibers. Therefore, thanks to exchangeable handles for splice protection sleeves, the cassette is suitable for various techniques of splicing fibers. Furthermore, the tubes' handles and in-built hinges facilitate mounting the cassettes and their multi-storage placement.

Applications

- Nodal points of fiber optic networks
- Distribution points of fiber optic networks

Features & benefits

- Capacity up to max. 24 splices
- Simple access to fibers' organizer
- Exchangeable handles for splices
- Combining cassettes with the use of in-built hinges
- Possibility of changing a fiber placement
- Facilitated mounting of fiber optic cable's tube
- Possibility of placing a fiber from a lower side of the cassette
- Easy identification of a cassette with the use of colorful icons
- Possibility of mounting splitters in Alubox housing

Technical specification

	SCM-B-12H
Length [ mm]	148
Width [ mm]	109
Depth [ mm]	5.5
Capacity [ mm]	max. 12 splices

Description

→ Fibrain SCM-B-12H fiber optic splice cassette is an element used in fiber optic equipment such as cabinets, fiber optic modules to guarantee storage of extra length of fiber and protect splices in specifically designed handles. Optimized thickness and oval shape of cassette facilitates effective placement of fibers. Splice cassette SCM-B-12H has possibility to mount Alubox optical splitter.

Applications

- Nodal points of fiber optic networks
- Distribution points of fiber optic networks

Features & benefits

- Capacity up to max. 12 splices
- Simple access to fibers' organizer
- Possibility of changing a fiber placement
- Labeling field
- Facilitated mounting of fiber optic cable's tube
- Easy identification of a cassette with the use of colorful icons
- Possibility of mounting splitters in Alubox housing

### Ordering information

FB7441	Heat-shrink splice protection sleeves 60 mm
FB7442	Heat-shrink splice protection sleeves 45 mm

### Also available

**FB7445** ANT crimp splice prtector

## SPLICE PROTECTION

### Description

→ Fibrain FB7442 heat-shrink splice protection sleeves provide high protection during splicing process. They can be characterized by small inner diameter (diameter after shrink  $D=2.0$  mm), optimal length and fast installation. Therefore, the heat-shrink sleeve is strengthened with a steel pin of 0.75 mm diameter and the same coefficient of heat expansion as optical fiber. It prevents from longitudinal stresses, which cause an increase of insertion and reflection loss. Fibrain heat-shrink sleeves do not cause any loss of optical power as they protect against mechanical damages, pollution and weather conditions. Therefore, the outer material guarantees sustainability and resistance to stretching and puncture.

### Applications

- Teleco mmunications systems
- FTTH networks
- Access and structured cable networks
- FTTx networks
- PON networks
- CATV networks

### Features & benefits

- Small outer diameter
- Strengthened by a pin of  $D_d = 0.75$  mm diameter
- In accordance with UL224, MIL-I-23053, GR-1380-CORE, ZN-96 TPSA-006 norms
- Transparent sleeve
- Max. shrink time: 40 s
- In accordance with RoHS Directive

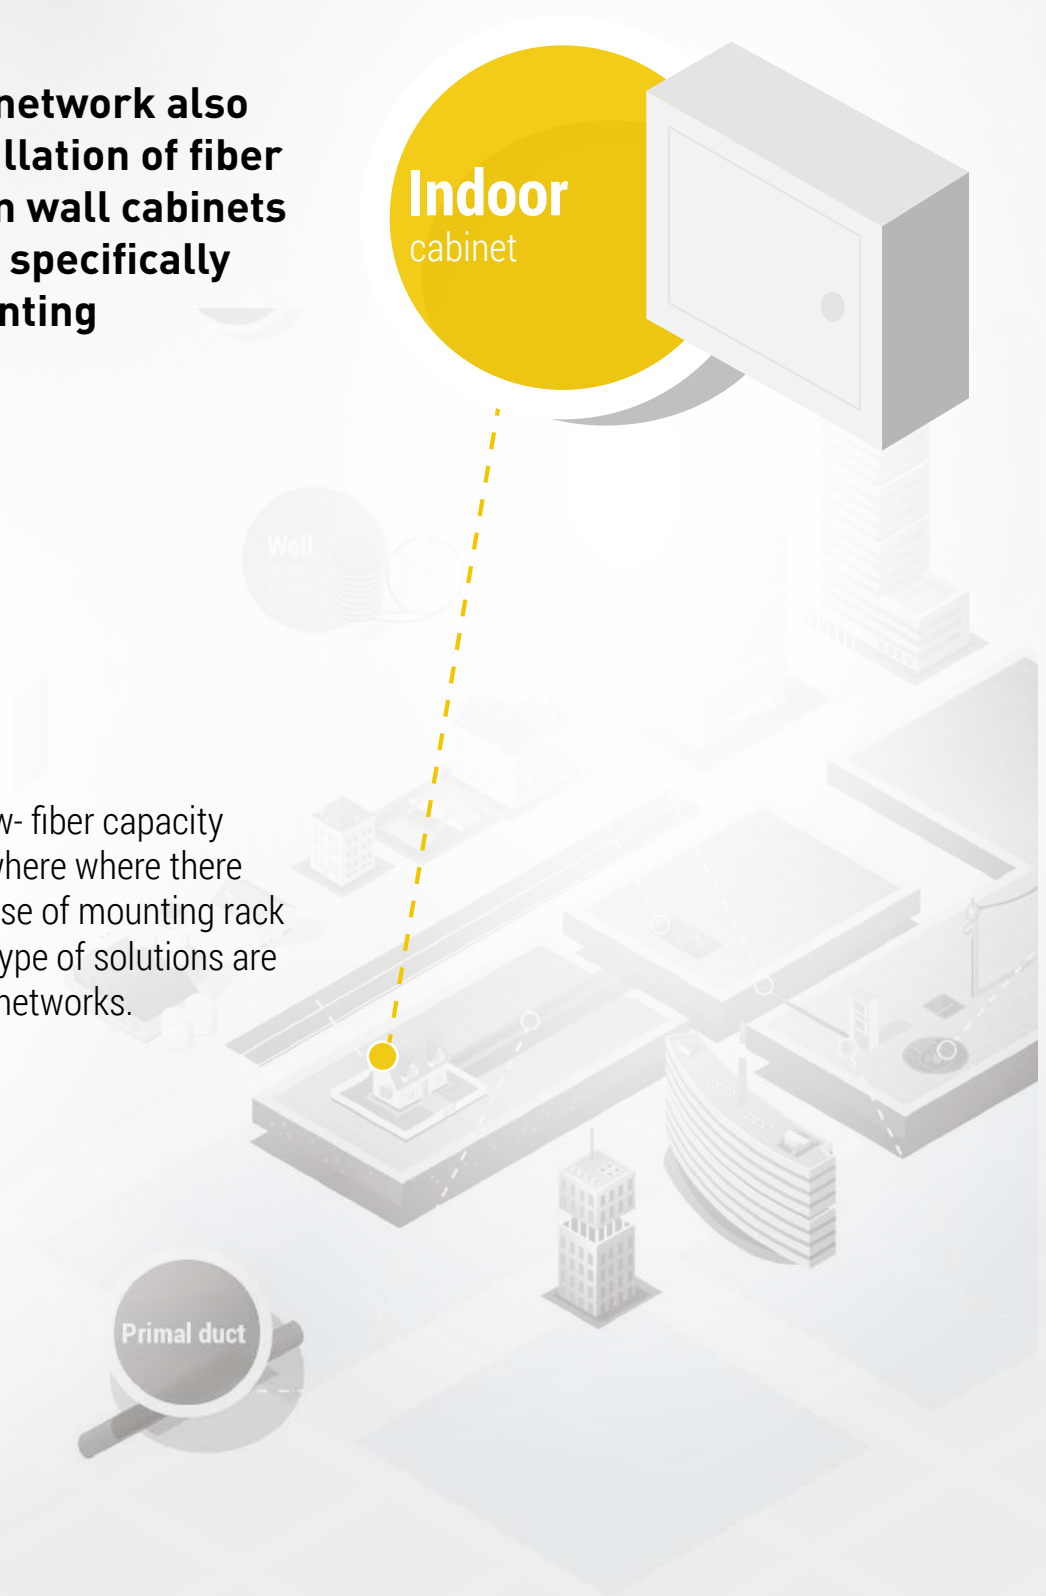

# Wall mounted distribution indoor

**Topology of fiber network also provides the installation of fiber optic cable ends in wall cabinets that are solutions specifically designed for mounting directly indoor.**

**Indoor**  
cabinet

Quite often, these are low- fiber capacity solutions and used anywhere where there is no possibility or purpose of mounting rack cabinet. Therefore, this type of solutions are frequently used in FTTx networks.

Primal duct

## VFTO-E1

## Description

- VFTO-E1 customer outlet is specifically designed for FTTH networks as a termination point of an optical duct for max. 4 optical fibers in various home and business networks. The outlet facilitates placing and connecting cables with 2 x SC or 4 x LC pigtails with the use of splices in a cassette. Connectors can be of PC and APC standard with inner and outer shutters. In case of mounting adapters, flangeless adapters should be used.

## Applications

- Distribution network
- FTTH networks with EAC cables
- Last mile connections
- Termination of FTTH networks

## Features

- Compact and innovative design
- Indoor applications
- Wide range of fiber optic adapters
- Description field for adapters on a top part of an outlet with a transparent flip cover
- Available in a customer option (\*lower labour costs)
- Possibility to personalize the outlet (logo)
- Possibility to mount on a DIN rail
- Adapter facilitates the mounting on a wall

	Splice protection sleeves	FB7442
	Splice holder (for 6 splices)	BU-XN-SH

### Description

- Fibrain BU-XN is a compact wall-mounted fiber optic box designed for flexibility during installation as well as customization options due to its modular design. Single box can accommodate up to 12 splices or be equipped in 5 adapters. A characteristic feature of BU-XN is the possibility of aggregating in segments and extension also on customer's premises. BU-XN as a distribution point enables uncut cable installation and branching of the optical fiber in three directions. The construction of the housing inside provides wide range of fiber organization as well as the assembly of the Alubox splitter type. As a standard, it is equipped with cable glands with zip ties and mounting dowels.

### Applications

- Indoor distribution box for FTTH network
- Inspection window

### Features & benefits

- Housing material PC+ABS – ensures high mechanical resistance
- Light and compact design
- Optional splice holders for 6 splices
- Optional panel for 5 adapters
- Possibility of mounting Alubox PLC splitters in splice holder
- Dedicated mounting points for inline and drop cable
- Possibility of installation up to 8 drop cables
- Maximum 2 splice holders per box

IFDB-D0	Fibrair IFDB cabinet in the D0 version with lead-in cables and a 12-splice cassette
IFDB-D0-12-12-2-13	Fibrair IFDB cin the D0 version equipped with 12 adapters and SCA pigtails, one PLC 1x8 splitter in the AluBox housing

### Description

- IFDB-D0-x cabinet is a multi-storey distribution point for optical fibers installed with the use of FTTH fiber optic system. Two-piece cabinet design provides flexible organization of the fibers and DROP cable inside a cabinet. It is equipped with a demountable organizer with a new splice cassette. The cabinet is equipped with the rack for 12 adapters of SC simplex opening, which provides the possibility of installing patchcords terminated with connectors and the rack for cable stock. Thanks to numerous stampings we can arrange fibers which are taken from splitter/ splitters and drop cables. Lead-in cables provide placing the bundle of drop cables and internal cable in a flexible way. There is also a possibility of placing a cable/cables by using openings in the side walls of the cabinet. The cabinet capacity is up to 12 splices.

### Applications

- Distribution point of the FTTH network inside the building

### Features & benefits

- Compact, a wall cabinet providing the installation on the small area inside the apartment-buildings or offices
- Available in a version for 48 subscribers
- Prepared to install the splitters
- Prepared to place cables and micropipes
- Possible welds: cable lines – splitter, cable line – cable line, splitter – drop cable, EAC cable – splitter
- Optional stock cable in frame
- Cabinet mounting with the use of wall plugs

Number of installed adapters:	1-12
Number of installed pigtails:	1-12

## Ordering information

IFDB-E0

Fibrain IFDB cabinet in the E0 version

Equipped version of IFDB-E0 cabinet according to DSH – please contact with our Sales Department.

### Description

→ IFDB-E0-x cabinet is a multi-storey distribution point for optical fibers installed with the use of FTTH fiber optic system. Cabinet design provides flexible organization of the fibers and DROP cable inside a cabinet. It is equipped with a demountable organizer with a new splice cassette. The cabinet is equipped with a demountable plate 12 adapters of SC simplex footprint adapters, which provides the possibility of installing patchcords terminated with connectors. IFDB-E0 cabinet is equipped with 4 handles for making cables stock. Thanks to special handles we can arrange fibers which are taken from splitter/ splitters and drop cables. Lead-in cables provide placing the bundle of drop cables and internal cable in a flexible way. There is also a possibility of placing a cable/cables by using openings in the side walls of the cabinet. The cabinet capacity is up to 24 splices.

### Applications

→ Distribution point of the FTTH network inside the building

### Features & benefits

- Compact, a wall cabinet providing the installation on the small area inside the apartment-buildings or offices
- Available in a version for 48 subscribers
- Prepared to install the splitters
- Prepared to place cables and micropipes
- Possible welds: cable lines – splitter, cable line – cable line, splitter – drop cable, EAC cable – splitter
- Optional stock cable in frame
- Cabinet mounting with the use of wall plugs

## Technical specification

	IFDB-D0-X
Height [ mm]	370
Width [ mm]	400
Depth [ mm]	110
IP protection	IP50
Impact protection	IK10
Cabinet material	Powder painted steel

## IFDB-D0-x

### Description

- Fibrain IFDB-F0-x cabinet is a multi-storey distribution point for optical fibers installed with the use of FTTH fiber optic system. Cabinet design provides flexible organization of the fibers and DROP cable inside a cabinet. It is equipped with a demountable fiber organizer and splicing cassette. Thanks to special handles we can arrange fibers which are taken from splitter/ splitters and drop cables. Lead-in cables provide placing the bundle of drop cables and internal cable in a flexible way. There is also a possibility of placing a cable/pipe up to 30 mm by using 6 openings in the side walls of the cabinet.

### Applications

- Distribution point of the FTTH network inside the building

### Features & benefits

- Capacity up to 48 splices
- Possibility of installation of Alubox splitters (4pcs of 1:4, 1:8 inside the splice trays and 1pcs of 1:32 on special hanger)
- Limited access due to a system lock
- Internal perforation for cable management
- Prepared to place drop cables and inline cable
- Removable front door with possibility to mount as left/right
- Plate for 38 SC SX adapters
- Cable strain relief

<b>Cable hanger:</b>	SZB-A-IFDT-B0

### Description

→ IFDT-B0-x cabinet is specifically designed to serve as a distribution point for optical fibers installed with the use of FTTH networks, it provides optimized placement of fibers inside the cabinet. Therefore, it is divided into two parts: a user and cable line, which are separated by the locks. The user part is equipped with an area to place spare optic fibers connectors which are disconnected. Thanks to numerous curves, we are able to provide optimized placement of the fibers, which come from a splitter/ splitters and the tubes from the cable line. Moreover, the splitters can be mounted easily and quickly inside the cabinet, regardless of their size. Additionally, entry ports provide the possibility to place installation pipes, which are used in in-house installations. The cabinet's capacity is varied from the switching field which is a demountable element and can have from 12 up to 48 fibers. The internal part of the cabinet has an organizer for documents. An additional cable hanger for fiber optic and Drop cable is an optional element of the IFDT cabinet which is mounted on the back side of the cabinet.

### Applications

→ Distribution point of the FTTH network

### Features & benefits

- Thanks to optimized size of cabinet, it can be mounted inside offices and houses
- Available in 2 versions for 24, 48 users
- Two-part design- line and users
- Prepared to install splitters
- Prepared to place brand new cables and micropipes
- Locks protect the cabinet's parts;
- Possibility of performing the splices: cable lines- splitter, cable lines - cable lines, splitter – Drop cables, EAC cable – splitter
- An optional cable/cables hanger placed inside the cabinet
- Mounting the cabinet with a use of nail expansion anchors

## IFDT-C0-x

### Description

- The IFDT-C0-x cabinet is dedicated as a distribution point for the optical fibers installed with the use of FTTH optical fibers systems.
- It provides the organisation of the fibers inside the cabinet in a economic and a flexible way. Splitters can be assembled quickly in the cabinet, regardless of their mountings. Entrance ports provide the possibility to organise installation pipes used in the indoors installations. Inside the cabinet 48 fibers can be placed. The internal part of the cabinet is equipped with a document pocket. An optional element is an extra frame with the place for the line and drop cable stock, mounted at the back of the cabinet.

### Applications

- Distribution point of the FTTH network inside the building

### Features & benefits

- Compact, a wall cabinet providing the installation on the small area inside the apartment-buildings or offices
- Available in a version for 48 subscribers

Configuration 1	8 x Ø4-10 mm
Configuration 2	16 x Ø6 mm
Dimensions (W)x(H)x(D) [ mm]	225x255x86
Ambient temperature	-40°C ÷ +50°C
Closure material	PC + ASA
Splice tray material	ABS V0
Splice tray holder material	ABS V0
Ingress protection	IP54

### Equipment and additional accessories of OBP-S8

## OBP-S8

### Description

→ Fibrain Distributor Box OBP-S8 is dedicated for FTTH networks deployed in open aerial areas. The housing as a distribution point is designed to terminate up to 36 fibers. As a standard box is equipped with 1 splice tray (2 others can be ordered separately). The facility for fiber/tube management gives an opportunity for installation of splitters and passive optical converters. Pivot swivel box cover enables wide access to interior (it opens up to 140°) and additionally cover block mechanism guarantee comfortable installations and maintenance work for installers. Housing as a standard is equipped with cylinder lock.

### Applications

- Distribution point for FTTH network
- Municipal networks
- Last mile

### Features & benefits

- Great mechanical resistance due to robust closure material (PC + ASA)
- Holder for pivot swivel splice trays
- Optional patch field for up to 9 FO adapters (SC/E2000)
- Possibility for fixation of AluBox closure PLC splitter (max 1:8) directly in splice trays or in splice tray holder
- Cable plugs and/or central strength member clamp for installation cables
- Up to 3 splice trays
- Splice trays for up to 12 fibers
- Optional dedicated cable reserve frame
- Optional mounting kit for older Fibrain Cable reserve frames

To order a non-standard option, please contact with our Sales Department.

# Distribution cabinets outdoor

**The structure of fiber-optic networks provides the use of external distribution points in the form of external cabinets. Depending on the topology, cabinets can have different capacity and inside organization of fibers.**

They can be equipped with the standard solutions that can be found in Part 4.

They can be made of composite or metal. Sometimes there can be solutions in which mounting active devices is necessary.

**In this case, we use SCAB cabinets, whose design is based on a rack system that provides mounting standard accessories in the form of patch panels.**

**Post**  
/cabinet

Pigtails:	according to CONNECTIVITY <sup>16</sup> catalogue

### Description

→ Fibrain FDH-Cx-x outdoor cabinets are specifically designed for optical fibers distribution, which are placed in a duct or microduct system, and then distributed to end-users. Therefore, the optical fibers are constructed from flame retardant materials (polyester + fiberglass) which are resistant to weather conditions (UV). Moreover, the ventilation system minimizes the moisture accumulation. Thanks to simple construction and small size of the cabinets, they are perfect solutions for end points placed on the ground. The cabinets provide the possibility to perform connections between cables/microcables and drop cables or bundle of microfibers due to an organizer, which can contain up to 27 adapters with SC SX openings. Also, extra cables/microcables for the use in the future, can be placed inside the cabinet. Despite small size of the cabinet, a lot of cables can be installed inside, and therefore a demountable construction such as a top/back part or a base of the cabinet provides easy access to the inside equipment.

### Applications

- Outdoor redistribution point of the FTTH network
- Local networks
- Last mile networks
- Optical fiber microduct system

### Features & benefits

- Constructed from material which guarantees high mechanical durability
- Available in a version for 24 subscribers
- Moveable two-section organizer
- Place for 27 adapters and PLC splitters in BlackBox or AluBox housings
- Place for 2 cassettes- 24 fibers and a hanger for a cable/microcable or a connection set bundle
- Cabinet protected by locks
- Possibility of performing the splices: cable lines- cable lines
- Performed to place cables and microcables

Type of entry cables	Microcables up to MK-LX8 Microbundles up to MK-AX2	Microcables up to MK-LX8 Microbundles up to MK-DX2
Type of foundation's filling	Expanded clay aggregate	Expanded clay aggregate
Amount of filling per cabinet	18dm³ *	18dm³ *
Working temperature	-50°C to +40°C	-50°C to +40°C
Flammability category	FH2 – 7 mm	FH2 – 7 mm
Level of protection	IP44/IP54/IK10	IP44/IP54/IK10
Housing colour	RAL 7035	RAL 7035
Housing material	Polyester + fiberglass	Polyester + fiberglass

\* The cabinet is delivered with appropriate amount of the filling

## Additional equipment

Adapters	according to CONNECTIVITY16 catalogue
Cassettes:	FB7401.2PP + a clip connecting the FB7401.5 cassettes (4pcs. when connecting 2 cassettes)
Splitters:	FPLC-xx in BlackBox and AluBox housings
Reduction connectors:	MT-ZR-0703 (FDH-C0-x), MT-ZR-0705 (FDH-C1-x)
Connection set:	MT-CS2403-xx (FDH-C0-x), MT-CS1205-xx (FDH-C1-x)
Pigtails:	according to CONNECTIVITY16 catalogue

### Description

→ Fibrain FDH-Dx-x outdoor cabinets are specifically designed for optical fibers distribution, which are placed in a duct or microduct system, and then distributed to end-users. Therefore, the optical fibers are constructed from flame retardant materials (polyester + fiberglass) which are resistant to weather conditions (UV). Moreover, the ventilation system minimizes the moisture accumulation. Thanks to simple construction and small size of the cabinets, they are perfect solutions for end points placed on the ground. The cabinets provide the possibility to perform connections between cables/microcables and drop cables or bundle of microfibers. Also, extra cables/microcables for the use in the future, can be placed inside the cabinet. Despite small size of the cabinet, a lot of cables can be installed inside, and therefore a demountable construction such as a top/back part or a base of the cabinet provides easy access to the inside equipment.

### Applications

- Outdoor redistribution point of the FTTH network
- Local networks
- Last mile networks
- Optical fiber microduct system

### Features & benefits

- Constructed from material which guarantees high mechanical durability
- Available in a version for 24 subscribers
- Moveable two-section organizer
- Place for 2 cassettes- 24 fibers and a hanger for a cable/microcable or a connection set bundle
- Cabinet protected by locks
- Possibility of performing the splices: cable lines- splitter, cable lines- cable lines
- Performed to place cables and microcables
- Protection against moisture accumulation

## Ordering syntax for equipped FDH-Dx outdoor cabinets

### Description

- Fibrain FDH-Sx outdoor cabinets are specifically designed for optical fibers distribution, which are placed in a duct or microduct system, and then distributed to end-users. Therefore, the optical fibers are constructed from flame retardant materials (polyester + fiberglass) which are resistant to weather conditions (UV). Moreover, the ventilation system minimizes the moisture accumulation. Thanks to simple construction and small size of the cabinets, they are perfect solutions for end points placed on the ground. The cabinets provide the possibility to perform connections between cables/microcables and drop cables or bundle of microfibers due to an organizer, which can contain up to 153 SC SX adapters. Also, extra cables/microcables coils for the use in the future, can be placed inside the cabinet. Despite small size of the cabinet, a lot of cables can be installed inside, and therefore a demountable construction such as a top/back part or a base of the cabinet provides easy access to the inside equipment.

# Outdoor closure

Fibers optic closures are an alternative to distribution points in the form of outdoor cabinets that can be mounted on both poles of the AirTrack system but also in telecommunications wells or directly buried in the ground.

**PATENT PENDING**

## Description

- The fiber optic closure FOBP is the element which is used to connect and protect the fiber optic connections in different applications. The fiber optic closure are specifically designed for connecting optic fiber routes as well for branchings. Fibrain FOBP closure can be placed in aerial application or wall-mounted in the man-holes. FOBP thermic type closure is equipped with 4 round ports for single cable with max. diameter Ø20 mm, 8 round ports for single cable up to Ø10 mm and one oval entrance for uncut cable. Depending on the size the fiber optic closure capacity is up to 144 or 288 fibers. FOBP closure can be equipped with adapters panel (9x SC SX for 144F, 18x SC SX for 288F closure). The closure can be widely used in all types of FTTx teleco mmunications system architecture.

## Applications

- Nodal points of fiber optic networks  
→ Distribution points of fiber optic networks  
→ FTTx networks

## Features & benefits

- Max. capacity up to 288 splices  
→ Thermic type of port seals  
→ Possibility of placing single cable:  
    → 4x Ø20 mm  
    → 8x Ø10 mm  
→ Possibility of placing uncut cables  
→ Aerial or inside a manhole mounting  
→ Built-in organizer for fiber optic tubes  
→ Possibility of mounting AluBox splitters  
→ (1:4, 1:8 – mounted in splice tray or dedicated handle (1pc)

## Additional equipment

### Description

→ Fibrain FOBP fiber optic closure is the element which is used to connect and protect the fiber optic connections in different applications. FOBP-Mx series of the closure is characterized by the hybrid construction of the base – base is equipped with thermally sealed cable entry ports and ports with mechanical seals. The fiber optic closures are specifically designed for connecting optic routes as well for branchings. Fibrain FOBP closure can be placed in aerial application or wall-mounted in the manholes. FOBP thermo-mechanical closure is equipped with 2 round mechanical ports which can be equipped with inserts that multiply the number of entered cables, 4 round ports for single cable with max. diameter Ø20 mm and one oval entrance for uncut cable. Seal variants (inserts) for mechanical ports are available in several variants – with a strictly defined diameter and number of cable entries and also membrane type insert for aerial application, which allows entered cables with different diameters (max. diameter for single entered cable Ø24 mm). Depending on the size the fiber optic closure capacity is up to 144 or 288 fibers. FOBP closure can be equipped with adapters panel (9x SC SX for 144F, 18x SC SX for 288F closure). The closure can be widely used in all types of FTTx telecommunication system architecture.

### Applications

- Nodal points of fiber optic networks
- Distribution points of fiber optic networks
- FTTx networks

### Features & benefits

- Capacity up to 288 fibers
- Leakproofness of mechanic and thermic ports
- Possibility of placing single line cables
- Possibility of placing uncut cables
- Aerial or inside a manhole mounting
- Inserts for mechanical ports available in several variants
- Built-in organizer for fiber optic tubes
- Possibility of mounting Alubox splitters (1:4, 1:8 – mounted in splice tray or dedicated handle (1pc), 1:16 – mounted in dedicated handle)

## Ordering information

FB8000.41

Fibrain fiber optic closure, 4 round ports and one oval, equipped with one cassette for welds, a mounting handle into a well or a pole.

Equipped version of FB8000.41 closure according to DSH - please contact with our Sales Department

### Description

→ The fiber optic closure FB8000.41 is the element which is used to connect and protect the fiber optic connections in different applications. The fiber optic closures are specifically designed for connecting optic fiber routes as well as for branchings. The fiber optic closure can be placed in aerial, wall-mounting or underground areas. It is equipped with 4 round ports for single cables (cut) and one oval entrance for uncut cables. The fiber optic closure is suitable for the applications up to 144 fibers, which can be used in various applications in the long-distance optic fiber transmission as well as in the local networks such as Fiber To The Home/ Fiber To The Curb (FTTH/FTTC). Therefore, in order to protect the fiber against the moisture, specifically designed FB8000.ABS absorbers can be mounted on a fiber optic closure's organiser.

### Applications

- Cardinal points of fiber optic networks
- Distribution points of fiber optic networks
- FTTx networks

### Features & benefits

- Max. capacity 144 welds
- Leakproofness of thermic ports
- Possibility of placing single line cables
- Possibility of placing uncut cables
- Aerial or inside a well mounting
- Built-in organiser for fiber optic tubes

#### Ordering information

FB8000.AP	Fibrair panel with 12 SC DX adapters for the FB800 group of fiber optic closures
-----------	--

A method of mounting a panel inside the FB8000.41 closure

A method of mounting a panel inside the FB8000.61 closure

A panel equipped with pigtails installed in the FB8000.61 closure

The grip of a panel in the FB8000.61 closure

## FB8000.AP

#### Description

- The Fibrair panel is specifically designed for the FB800 group of fiber optic closures. A panel with adapters with max. capacity up to 12 SC DX adapters facilitates the switching between the optical fibers terminated with pigtails which are installed in a fiber optic closures. Therefore, there is a possibility of mounting fiber optic splitters inside Alubox mountings, thus such fiber optic closure can be used in the FTTx networks.

#### Applications

- Nodal points of fiber optic networks
- Distribution points of fiber optic networks
- FTTx networks

#### Features & benefits

- Max. capacity – 12 SC DX adapters
- A panel can be quickly and easily mounted to the fiber optic closure
- A possibility of mounting splitters in the Alubox mounting
- Opening the panel provides quick access to the cassettes
- Protected from damaging fibers during opening a panel
- Compatible with FB8000.41 and FB8000.61 fiber optic closures

FB8000.AP

IP protection	DropCables

## Additional equipment

Cassettes: FDHB-A0-TRAY

## Ordering information

FDHB-A0

Fibrain DROP HUB closure, 5 round ports equipped with two cassettes, a handle to mount on a well's wall, a tightness adjustment valve, a grounding screw

## FDHB-A0

## Description

- FDHB-A0 closure is an innovative and specifically designed solution for FTTx networks. The closure has 3 single ports for single cables, a one port is dedicated for uncut cables and a one Drop port for a single cable Ø 6 mm and four cable of drop Ø 2.0 mm. Due to additional handles, a closure can be mounted in a well and on a post with the use of available handles.

## Applications

- Nodal points of fiber optic networks
- Distribution points of fiber optic networks
- FTTx networks

## Features &amp; benefits

- Max. capacity 60 welds
- Tightening ports of a mechanic type
- Possibility of placing line cables and drops
- Possibility of placing uncut cables
- Possibility of mounting the closure on the air track and inside underground in the wells
- Pneumatic valve for testing the tightness
- A grounding screw

# Fiber optic cable frame and spare length cable boxes

**Fiber optic cable frame and spare length cable boxes are fundamental elements of fiber optic networks. They are often used in telecommunications wells and in server rooms where spare lengths of fiber optic cable are often designed.**

They guarantee esthetic placement of a cable and in case of cable spare length box prevent unauthorised access.

SZ-A-xx cable reserve frame

Technical specification

	SZ-A-40	SZ-A-60
Height [ mm]	400	600
Depth [ mm]	95	95
Width [ mm]	400	600
Capacity [ mm]	Up to 50 m of 10 mm cable	Up to 80 m of 10 mm cable

Ordering information

SZ-A-40	Fibrain cable reserve frame 400 mm
SZ-A-60	Fibrain cable reserve frame 600 mm

SZ-A-xx

Description

- Fibrain reserve frame provides more appropriate and effective use of space in distribution points. Longer sections of cable reserve are used in the installation process. Optimized shape of the cable reserve frame provides the opportunity to adjust the length of a cable during coiling, and therefore guarantees esthetic placement of a cable.

Applications

- Nodal points of optic fiber networks;
- Distribution points of fiber optic networks
- Server rooms and factories manufacturing cables

Features & benefits

- Capacity up to 80 m of the fiber optic cable with 10 mm diameter
- Easy access to cable reserve
- Made of galvanized sheet metal
- Mounting on nail expansion anchors

CABLE RESERVE FRAMES

SZB-A-IFDT-B0/C0 cable reserve frame for IFDT-B0/C0 cabinet

Technical specification

	SZB-A-IFDT-B0	SZB-A-IFDT-C0
Height [ mm]	315	315
Depth [ mm]	65	65
Width [ mm]	390	270
Capacity [ mm]	Up to 10 m of 10 mm cable	Up to 5 m of 10 mm cable

Ordering information

SZB-A-IFDT-B0	Fibrain cable reserve frame with casing for IFDT-B0 cabinet
SZB-A-IFDT-C0	Fibrain cable reserve frame for IFDT-C0 cabinet

SZB-A-IFDT-B0/C0

Description

→ Fibrain cable reserve frame provides more appropriate and effective use of space in distribution points where IFDT cabinets are mounted. Longer sections of cable reserve are used in the installation process. An optimized shape of the cable reserve frame provides the opportunity to adjust the length of a cable during coiling, and therefore guarantees esthetic placement of a cable. The cable reserve frame is mounted at the back side of a IFDT cabinet with the use of two hinges. Due to two screw caps in the IFDT-B0 cabinet, the cable reserve frame is not accessible.

Applications

→ Distribution points of FTTH networks

Features & benefits

- Capacity up to 5 (C0) or 10 (B0) m of fiber optic cable with 10 mm diameter
- Easy access to cable reserve
- Casing made of galvanized steel sheet RAL7035
- Mounted with the use of nail expansion anchors
- Equipped with hinges to be mounted on IFDT cabinet

## SZ-D-S12 Fiber optic and drop cable reserve frame

## Technical specification

	SZ-D-S12
Height [ mm]	550
Depth [ mm]	108
Width [ mm]	607
Weight [kg]	3
Capacity [ mm]	Up to 65 m of 10 mm cable

## Ordering information

SZ-D-S12	Fibrain cable reserve frame with pole bracket for OBP-S2
----------	--

## SZ-D-S12

## Description

- Fibrain fiber optic and Drop cable reserve frame provides more appropriate and effective use of space in distribution points where IFDT cabinets are mounted. Longer sections of cable reserve are used in the installation process. An optimized shape of the cable reserve frame provides the opportunity to adjust the length of a cable during coiling, and therefore guarantees esthetic placement of a cable. The cable reserve frame is to be mounted on a well.

## Applications

- Distribution points of fiber optic networks
- Nodal points of fiber optic networks
- FTTx systems

## Features &amp; benefits

- Capacity up to 60 m cable with 6 mm diameter
- An easy access to cable reserve
- Made of galvanized steel sheet
- Mounted with the use of nail expansion anchors
- A cable reserve frame is composed of two parts providing the possibility to mount BPEO-S2 distribution fiber splice closure

## SZ-D-S8-M-xx Cable reserve frame with pole bracket

## SZ-D-S8-M

## Technical specification

	SZ-D-S8-M
Height [ mm]	471
Depth [ mm]	116
Width [ mm]	516
Width [ mm]	516
Capacity [ mm]	Up to 30 m of 10 mm cable

## Ordering information

SZ-D-S8-M-ZN	FibraIn cable Reserve Frame with pole bracket SZ-D-S8-M, galvanized steel
SZ-D-S8-M-ZN-P	FibraIn cable Reserve Frame with pole bracket SZ-D-S8-M, galvanized steel powder coated, mounting with wing screw

## Description

- FibraIn Cable Reserve Frame with pole bracket enables montage of OBP-S8 Pole Mounting Distributor. It enables, for the installer, to perform quick and efficient cable reserve deposit on the pole. During the installation they use much longer sections of telecommunication cables which has to be organized nearby distributor points. Optimized shape of frame enables adjustment of cable length while winding the cable.

## Applications

- Distribution nodes of FO networks
- FTTx networks

## Features &amp; benefits

- Easy access to cable reservation reservoir
- Made of galvanized steel sheet or galvanized steel powder coated

### Technical specification

	Ø14 mm	70 m
	Ø16 mm	50 m

### Ordering information

SZ-D-FOBP-ZN-P

Fibrain cable reserve frame with pole holder for FOBP closure, powder coated galvanized steel.

View of installed FOBP closure  
on frame

#### Description

- Fibrain cable reserve frame with pole holder for FOBP closure. It enables to perform quick and efficient cable reserve deposit on the pole. During the installation longer sections of telecommunication cables are used which has to be organized in nearby distribution points. Optimized shape of frame enables adjustment of cable length while winding the cable.

#### Applications

- Distribution points of fiber optics networks
- Nodal points of fiber optics networks
- FTTx networks

#### Features & benefits

- Easy access to cable reserve deposit
- Made of powder coated galvanized steel
- Pole fixation by band-iron tape
- Holder designed to work with FOBP closure

### Technical specification

	SZ-D-DN150	SZ-D-DN250
Length [ mm]	164	264
Width [ mm]	98	98
Height [ mm]	200	200

### Ordering information

SZ-D-DN150	Fibrain distance holder for cable reserve frame 150 mm
SZ-D-DN250	Fibrain distance holder for cable reserve frame 250 mm

## SZ-D-DN

#### Description

- Fibrain SZ-D-DN distance holder is intended for pole-mount brackets with the subscriber and line cable reserve frames of the SZ-D family. The distance holder is available in two sizes and enables the mounting of the cable reserve frame within 150 mm or 250 mm from the edge of the pole.

#### Applications

- Distribution points of fiber optic networks
- Nodal points of fiber optic networks
- FTTx systems

#### Features & benefits

- Made of galvanized steel
- Installation to the pole using steel tape

SZB-A-60	Fibrain lockable cable reserve case 600 mm

## SZB-A-xx

## Description

- Fibrain fiber optic and Drop cable reserve frame provides more appropriate and effective use of space in distribution points where IFDT cabinets are mounted. Longer sections of cable reserve are used in the installation process. An optimized shape of the cable reserve frame provides the opportunity to adjust the length of a cable during coiling, and therefore guarantees esthetic placement of a cable. The cable reserve frame is to be mounted on a well.

## Applications

- Nodal points of fiber optic networks
- Distribution points of fiber optic networks

## Features &amp; benefits

- Capacity up to 80 m of fiber optic cable of 10 mm diameter
- Easy access to cable reserve
- Casing made of steel sheet RAL 7035
- Case protects the edges against damaging the sheath of a cable
- Mounting on nail expansion anchors
- Lockable casing protecting cable reserve
